

What is the difference between safety and security?

Safety is the condition of a “steady state” of an organization or place doing what it is supposed to do.

Security is protection from, or resilience against, potential harm (or other unwanted coercive change) caused by others, by restraining the freedom of others

What is a safe software and secure software?

Safe software is system safety in the design, development, use, and maintenance of software systems and their integration with safety-critical hardware systems in an operational environment.

Secure software is able to eliminating vulnerabilities and conducting penetration tests.
